Running Tableau Workbook with Tableau Desktop

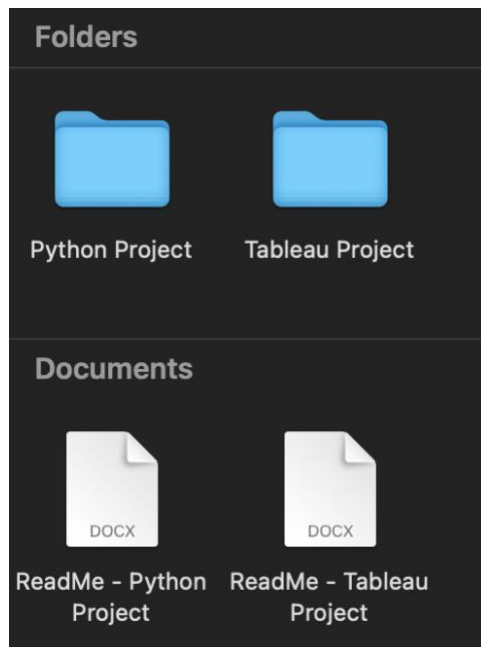

Information below contains directions to successfully run the Tableau workbook using Tableau Desktop

Prerequisites

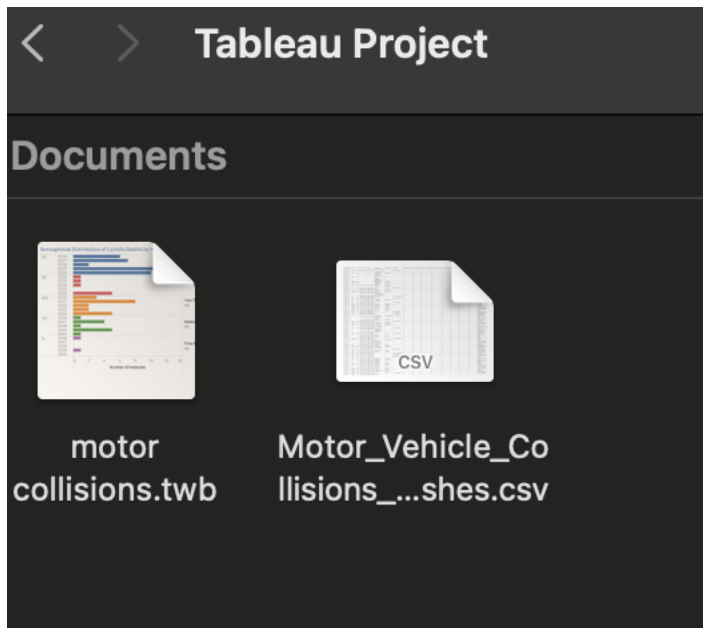

1. Tableau Desktop Installed

Procedure

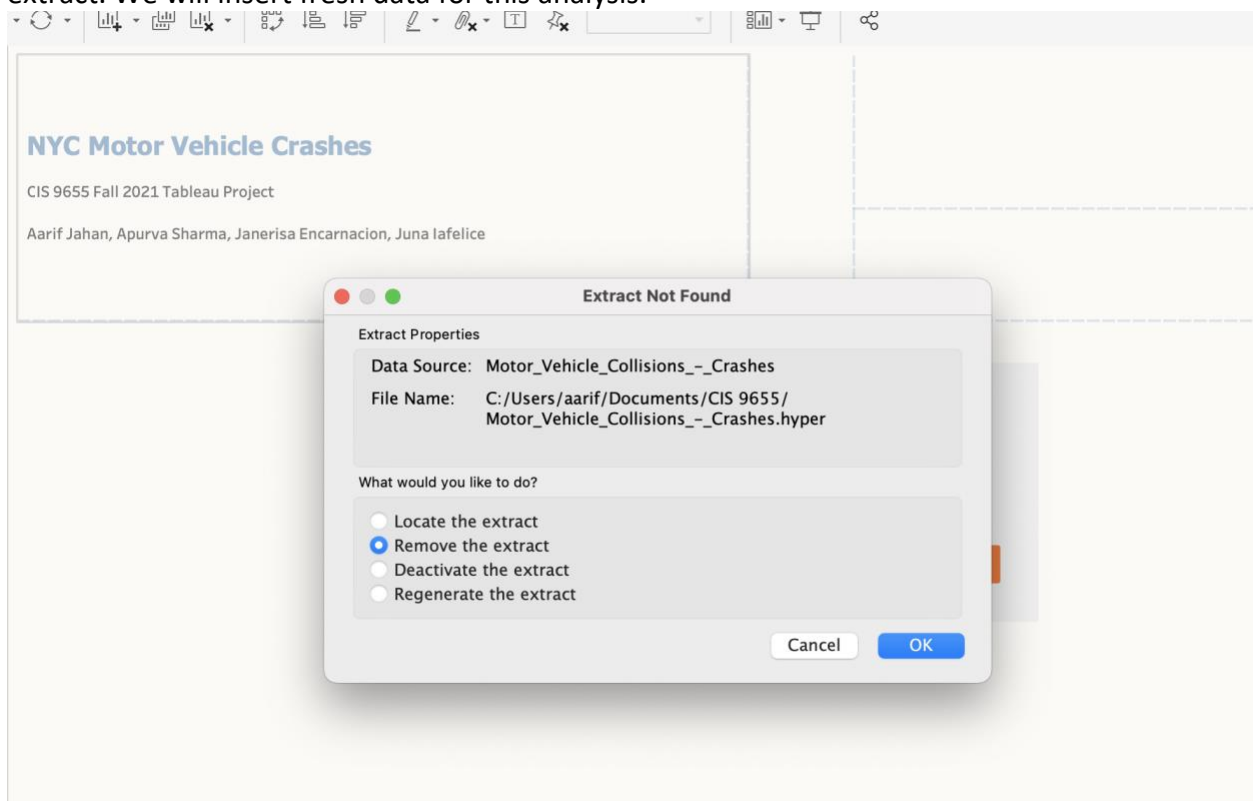

Step 1: After unzipping the project submission folder, copy the Tableau Project folder to any reasonable local directory

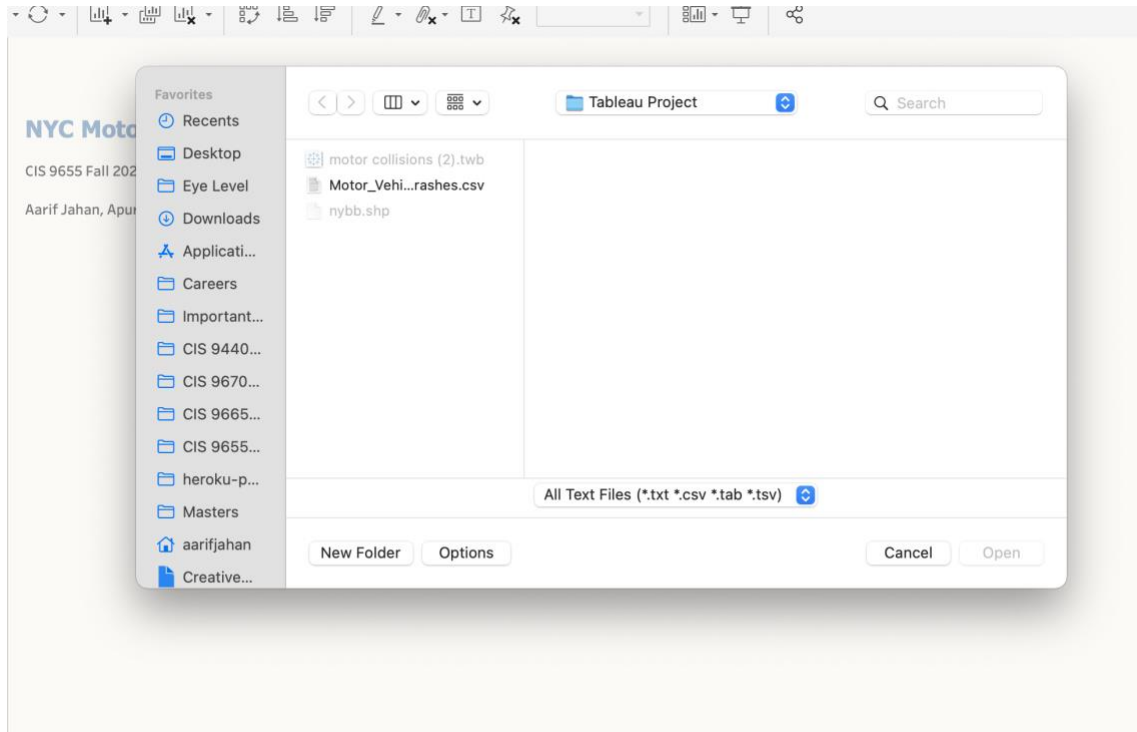

Step 2: Open the tableau workbook file (.twb) from the Tableau Project folder

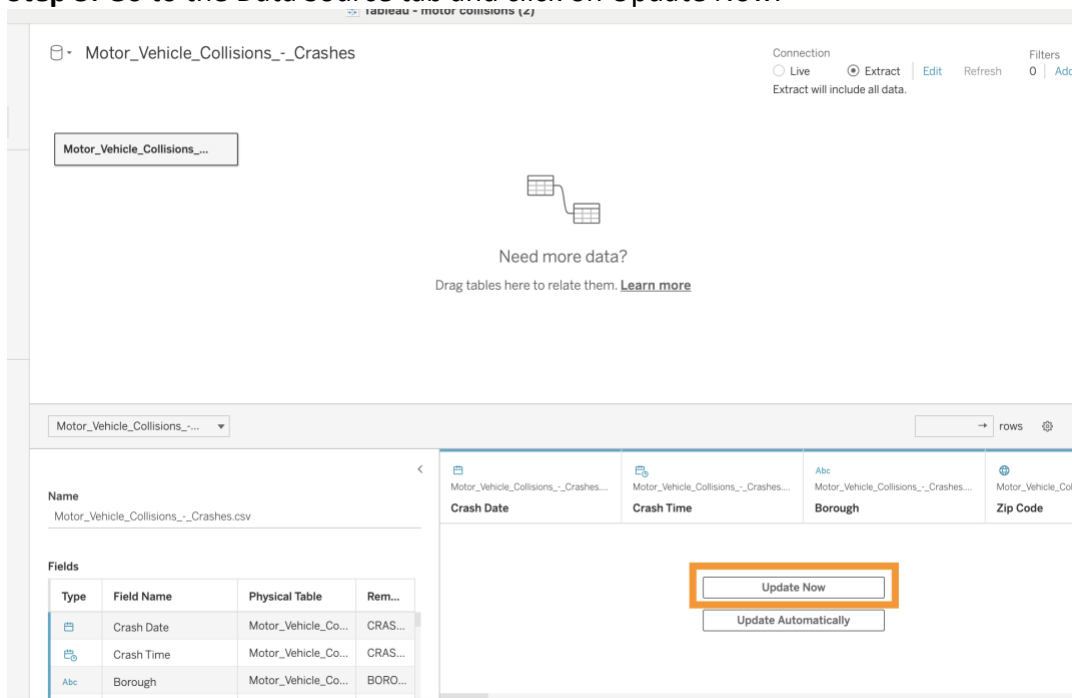

Step 3: On opening, the workbook will ask for Extract handling information. Click on remove extract. We will insert fresh data for this analysis.

Step 4: A second window will open. Navigate to the .csv data file on the Tableau Project folder and click Open.

Step 5: Go to the Data Source tab and click on Update Now.

Step 6: Once data is loaded, enjoy data exploration!
